

- Open Google maps and right click the rally venue.

A menu pops up with the Latitude, Longitude as the first item. Click on this pair. Google tells you it has copied the Latitude, Longitude to clipboard.

- Open the Rally Event Attendees Information webpage

In the left hand menu, click 'Edit Page'.

At the bottom of the page you can see the `ridesList()` function call. You can see the (Latitude, Longitude) pairs for the 'Food Places' and 'Interest Places'.

Paste the copied (Latitude, Longitude) for the rally venue over both of those.

If you need to adjust the radius, I think the final '30' parameter will be the radius in km.

If you click the 'Source' button (top right in the menu bar), you will see the source for the webpage which includes all the formatting constructs.

Clicking 'Source' again reverts you back to the WYSIWYG mode.
